Electrical Engineer

It takes a strong team of experts working together to maintain the safety and reliability of the power grid that serves our homes and businesses. Engineers represent a key function at Rocky Mountain Power where they help plan, design and oversee construction of essential electrical systems throughout the region. This job requires project management and leadership skills including the ability to work within project timelines and budgets.

Renewable Energy Manager

To embrace the future of sustainable energy, Rocky Mountain Power has a large and growing fleet of renewable energy generation facilities. Renewable energy is harnessed from sources such as wind, sunlight (solar), water (hydro), organic matter (biomass), and the earth's internal heat (geothermal). Renewable energy managers research, develop, install and promote renewable energy. As an essential role in a cleaner future, this job requires technical expertise and problem-solving skills.
